Chairman’s remarks to a meeting (A. R. Hall), 97

Charlton, T. M.—An extension of Maxwell’s theory of pin-jointed
frameworks by M. W. Crofton, F.R.S., 53

Christiaan Huygens and Newton’s theory of gravitation (H. A. M.
Snelders), 209

Clock-making in Britain and The Netherlands (J. H. Leopold), 155

Crofton, M. W., an extension of Maxwell’s theory of pin-jointed
frameworks by (T. M. Charlton), 53

Crown, the public and the new science 1689–1702, the (M. C. W.
Hunter), 99

Dunn, J. M.—‘Bright enough for all our purposes’: John Locke’s
conception of a civilized society, 133

Glorious Revolution, Anglo-Dutch medicine and the (S. J. Schaffer), 167

Gravitation, Christiaan Huygens and Newton’s theory of (H. A. M.
Snelders), 209

Hall, A. R.—Chairman’s remarks, 97

1632–1723, 249

Hand and mind in time measurement: the contribution of art and
science. The Wilkins Lecture, 1988 (D. S. Landes), 57

Hevelius’s business: an unpublished letter from Henry Oldenburg to the
Earl of Tweeddale (P. B. Wood), 25

Hunter, M. C. W.—The Crown, the public and the new science
1689–1702, 99

Huygens, Christiaan, and Newton’s theory of gravitation (H. A. M.
Snelders), 209

[ 277 ]
Leeuwenhoek and other Dutch correspondents of the Royal Society (L. C. Palm), 191
Leeuwenhoek, Antoni van, 1632–1723. The Leeuwenhoek Lecture, 1988 (A. R. Hall), 249
Leopold, J. H.—Clock-making in Britain and The Netherlands, 155
Locke’s conception of a civilized society: ‘bright enough for all our purposes’ (J. M. Dunn), 133

Mathematics, Newton’s role in the history of (G. J. Whitrow), 71
Maxwell’s theory of pin-jointed frameworks: an extension by M. W. Crofton, F.R.S. (T. M. Charlton), 53
Medicine, Anglo-Dutch, and the Glorious Revolution (S. J. Schaffer), 167

Navies, William III and his two (J. R. Bruijn), 117
Newton’s Opticks and Huygens’ Traité de la lumière: pursuing and eschewing hypotheses (A. E. Shapiro), 223
Newton’s role in the history of mathematics (G. J. Whitrow), 71
Newton’s, Sir Isaac, burning mirror: brighter than how many Suns? (D. L. Simms and P. L. Hinkley), 31
Newton’s theory of gravitation, Christiaan Huygens and (H. A. M. Snelders), 209

Opticks, Newton’s, and Huygens’ Traité de la lumière: pursuing and eschewing hypotheses (A. E. Shapiro), 223

Palm, L. C.—Leeuwenhoek and other Dutch correspondents of the Royal Society, 191
Pin-jointed frameworks: an extension of Maxwell’s theory by M. W. Crofton, F.R.S. (T. M. Charlton), 53
Porter, Sir George—Welcome and introduction to a meeting, 93

Raman effect, the discovery of the (J. C. D. Brand), 1

Schaffer, S. J.—Anglo-Dutch medicine and the Glorious Revolution, 167
Shapiro, A. E.—Newton’s *Opticks* and Huygens’ *Traité de la lumière*: pursuing and eschewing hypotheses, 223
Simms, D. L. and Hinkley, P. L.—Brighter than how many Suns? Sir Isaac Newton’s burning mirror, 31
Snelders, H. A. M.—Christiaan Huygens and Newton’s theory of gravitation, 209

Time measurement, hand and mind in: the contributions of art and science. The Wilkins Lecture, 1988 (D. S. Landes), 57
*Traité de la lumière*, Huygens’, and Newton’s *Opticks*: pursuing and eschewing hypotheses (A. E. Shapiro), 223
Tweeddale, the Earl of. Hevelius’s business: an unpublished letter from Henry Oldenburg to (P. B. Wood), 25

Whitrow, G. J.—Newton’s role in the history of mathematics, 71
Wilkins Lecture, 1988. Hand and mind in time measurement: the contributions of art and science (D. S. Landes), 57
William III and his two navies (J. R. Bruijn), 117

NOTES AND RECORDS

INSTRUCTIONS FOR AUTHORS

1. *Notes and Records* is a journal appearing in January and July, for the publication of original papers on the history of the Royal Society and its membership, and of the science, medicine and technology associated with it. The Editor welcomes contributions on these subjects both from scientists and from historians.

2. Contributions should normally not exceed 5000 words and may be shorter; small numbers of relevant illustrations are welcome. Line drawings should be in waterproof black ink on fine board or tracing paper, and photographs for half-tone reproduction should be in the form of highly glazed prints.

3. A descriptive title should head the paper, followed by the author's name and address. Honours and degrees are not shown, but Fellowship of the Royal Society and the British Academy, and membership of the Fellowship of Engineering are indicated.

4. Manuscripts should be typed in double-spacing on one side of the page only, with a margin of about 3 cm on the left side and at the head of each sheet. They should be sent to: The Editor of *Notes and Records*, The Royal Society, 6 Carlton House Terrace, London SW1Y 5AG. Where a paper is divided into sections, these should be described by short headings. Short quotations should be enclosed in single quotes; longer passages should form a separate paragraph indented from the normal margin.

5. Notes should be typed separately from the main body of the manuscript. The Notes are printed at the end of each paper in numerical order, reference being made in the text by the use of numbers in brackets, thus (1).

6. Reference to books should include the author's name and initials, title (underlined for italics), town of origin and publisher (when appropriate for recent publications) and year of publication (in brackets). Reference to papers in journals should include the author's name and initials, title of the paper, title of the journal abbreviated according to the principles of the *World List of Scientific Periodicals*, 4th edn (London: Butterworths, 1963–65), and underlined to indicate italics), volume number, the numbers of the first and last pages and the year of publication (in brackets). Examples of references are:

   (22) J. P. Muirhead, *The Origin and Progress of the Mechanical Inventions of James Watt*, vol. 2 (Murray, 1854), p. 279

   (51) E. Darwin, 'An account of an artificial spring of water', *Phil. Trans. R. Soc. Lond.*, 75, 1–7 (1785).

7. When a paper is accepted authors will receive a set of galley proofs with a form quoting prices for extra offprints beyond the fifty they receive gratis. Substantial changes in a paper at proof stage must be avoided.
