NOTES AND RECORDS

INSTRUCTIONS FOR AUTHORS

1. *Notes and Records* is a journal appearing in January and July, for the publication of original papers on the history of the Royal Society and its membership, and of the science, medicine and technology associated with it. The Editor welcomes contributions on these subjects from scientists and historians.

2. Submission of a paper by an author is taken as acceptance that the Editor’s decision on the suitability of the paper for publication is final.

3. Submitted papers must not have been published previously, nor be under consideration for publication elsewhere.

4. Contributions should normally not exceed 5000 words of text and may be shorter; relevant illustrations are welcome. Line drawings should be in waterproof black ink on fine board or tracing paper, and photographs for half-tone reproduction should be in the form of highly glazed prints.

5. A descriptive title should head the paper, followed by the author’s name and address. Honours and degrees are not shown, apart from F.R.S., F.B.A. and F.Eng.

6. Manuscripts should be typed in double-spacing on one side only of the A4 pages, with a margin of about 3 cm on the left side and at the head of each sheet. They should be sent to: The Editor of *Notes and Records*, The Royal Society, 6 Carlton House Terrace, London SW1Y 5AG. Where a paper is divided into sections, these should be described by short headings. Short quotations should be enclosed in single quotes; a longer passage should form a separate paragraph indented from the normal margin. Authors are advised to ensure that the text is easy to read for referees, and not to submit draft-quality dot-matrix printout. After refereeing, the Royal Society welcomes final papers on disk, but the author should consult the Royal Society’s editorial staff to ensure compatibility.

7. Notes should be typed separately from the main body of the manuscript. The Notes are printed at the end of each paper in numerical order, reference being made in the text by the use of superscript numbers.

8. Reference to books should include the author’s name and initials, title (underlined for italics), town of origin and publisher (where appropriate for recent publications) and year of publication (in brackets). Reference to papers in journals should include the author’s name and initials, title of the paper, title of the journal (abbreviated according to the principles of the World List of Scientific Periodicals, 4th edn (London: Butterworths, 1963–5), and underlined to indicate italics), volume number, the numbers of the first and last pages and the year of publication (in brackets). Examples of typed references are:

9. After a paper has been accepted, authors will receive a set of page proofs with a form quoting prices for extra offprints beyond those they receive gratis. Substantial changes in a paper at proof stage must be avoided.
NOTES AND RECORDS OF THE ROYAL SOCIETY OF LONDON

Volume 50 Number 2 (1996)

CONTENTS

Preface
by Sir Alan Cook, F.R.S. the editor of Notes and Records 151
